### **Description**

Scanning Computerized Ophthalmic Diagnostic Imaging (SCODI) is a non-invasive, non-contact imaging technique that produces high resolution, cross-sectional tomographic images of ocular structures and is used for the evaluation of anterior segment and posterior segment diseases. This policy describes the medical necessity indications for SCODI.

# **CLINICAL POLICY Scanning Computerized Ophthalmic Diagnostic Imaging**

- a. Requires Spectral Domain-Optical Coherence Tomography (SD-OCT);
- b. In the presence of systemic lupus erythematosus or rheumatoid arthritis.
- **II.** It is the policy of health plans affiliated with Centene and Envolve that SCODI is not medically necessary for the following indications:
  - A. Advanced glaucomatous damage;
  - B. Screening for glaucoma.

### **Background**

Optical coherence tomography (OCT) has advanced considerably since it was first applied to the eye. It is an extension of a technique called low-coherence interferometry, which was initially applied to ophthalmology for in vivo measurements of eye axial length. At the time of introduction, it was used to obtain in vivo optical cross sections of the anterior segment, as well as retinal diseases, such as macular detachment, macular hole, epiretinal membrane, macular edema, and idiopathic central serous chorioretinopathy. OCT cross sections were also used to evaluate the optic disc and retinal layers such as the retinal nerve fiber layer (RNFL). Scan patterns that enabled reproducible measurements were developed, and these eventually became incorporated into a commercial system, which had an axial resolution of  $\sim 10~\mu m$ .

The implementation of broadband light sources into OCT systems improved the axial resolution from  $\sim \! 10~\mu m$  to as high as 2  $\mu m$  in tissue. Acquisition speed has improved considerably by detecting backscattering signals in the frequency domain, which means backscattered depth information at a given location can be collected without the movement of a reference mirror. Frequency information is acquired with a broad-bandwidth light source, charge-coupled device (CCD) camera, and a spectrometer or by sweeping a narrow-bandwidth source throu.gh a broad range of frequencies with a photodetector. The approach that incorporates a broadband light source is often referred to as spectral-domain (SD)-OCT, whereas the latter is termed swept-source (SS)-OCT. In both approaches, intensity profiles (A-scans) are obtained using a Fourier-transform of the detected frequencies, and this facilitates rapid A-scan collection. In addition to improved scanning speed, frequency-domain-OCT also offers the advantage of higher detection sensitivity—that is, it exhibits higher signal-to-noise, given a perfect reflection.

Posterior segment SCODI also permits high resolution assessment of the retinal and choroidal layers, the presence of thickening associated with retinal edema, and of macular thickness measurement. Vitreo-retinal and vitreo-papillary relationships are displayed permitting surgical planning and assessment.

Anterior segment SCODI is used in the evaluation and treatment planning of diseases affecting the cornea, iris, and other anterior chamber structures. The procedure also may be used to provide additional information during the planning and follow-up for corneal, iris, and cataract surgeries.

Clinical evidence has shown that long-term use of chloroquine (CQ) and/or hydroxychloroquine (HCQ) can lead to irreversible retinal toxicity. Therefore, these two medications are deemed high risk, and Optical Coherence Tomography (CPT 92134) may be indicated to provide a baseline prior to starting the medication and as an annual follow-up. Clinical evidence shows that the resolution of time-domain OCT instruments is not sufficient to detect early toxic retinal changes. Because of that, Spectral Domain-Optical Coherence Tomography (SD-OCT) is expected to be

used to detect retinal changes that are due to the use of CQ or HCQ. Eye care providers without SD-OCT equipment should refer beneficiaries to offices or centers that have SD-OCT available.
